- Ability to change the language of the Skype user interface - Ability to hear every portion of the conversation (name, time of the conversation (voice, voice and speech, text, typing) is being heard - Ability to hear the Skype user interface visually (name, picture of the caller) - Ability to hear the Skype user interface audibly (pictures of the caller, recent users, contact list). - Ability to see the application log in and log out events and their texts Version 1.4 This version was just released today, because I have to integrate with a new member company to configure and build the application using their services. Please use the new version as long as possible. A: This is the answer to a question I had about a similar but a little older product that I am now looking into. has all the details that I need and went to check them out. It seems to work with Windows 7 and 8 and a few others. It is not expensive and works well. I have a couple of clients that are using it. I can link you to them or if you use their forums there is a lot of information there. A: Just looking at a non-high end solution.
